Derm-eclat™

The Derm-eclat™ Skin Rejuvenation System is a topical procedure designed to eliminate hyperpigmentation of melanic origin in a quick, safe and effective manner.

The Derm-eclat™ system successfully treats melasma, dark spots, sun damage, uneven skin tones and skin hyperpigmentation problems resulting from sun exposure, hormonal disorders and genetic predisposition.

How does it work?

The Derm-eclat system is comprised of two stages.

The first stage is applied in our office by our medical aesthetician.

The Derm-eclat™ Pro Mask (at our office)

Intensive depigmentation action that combines whitening, exfoliating and antioxidant active principals inhibiting all the stages involved in the formation of hyperpigmentation. Our aesthetician will apply the mask which you will remove at home. Depending upon your skin type, the mask may be left on for up to ten hours.

The Derm-eclat™ Skin Treatment (at home)

You will apply the maintenance cream at home to continue the depigmentation action of the Derm-eclat™ Pro Mask. This will promote the permanent reduction of blemishes and maintenance of results.

When can I expect to see results?

During the first week of treatment using the Derm-eclat™ system, the skin will show substantial improvement. Pigmentation marks will be diminished and the skin will start to show a brighter and rejuvenated look.

What are the potential risks or precautions to take?

The most important factor in the development of hyperpigmentation is exposure to sunlight. The use of an SPF 30 or higher sunscreen is essential during and after the treatment in order to protect the skin from harmful UVA and UVB rays.

During and after treatment with the Derm-eclat™ system, it is important to keep skin properly hydrated. Application of a moisturizer throughout the day is essential in order to restore and maintain proper hydration.

What is the cost of the Derm-eclat™ treatment?

The cost of the Derm-eclat™ peel with home maintenance cream is \$1000 + HST.
