What is Derm-Eclat

Derm-Eclat is a topical de-pigmentation procedure that is extremely versatile and adapts well to any skin type. Derm-Eclat softens or eliminates mild to severe pigmentation, while helping to reveal the luminosity and tone of the skin. Derm-Eclat is based on the inhibition of tyrosinase, a basic enzyme in the melanin formation process. Several of the substances present in the Derm-Eclat formulation work by blocking this enzyme, or even by inverting the metabolic process of the transformation chain.

Pre-Treatment

Please do not wear any facial makeup to the office on the day of your treatment. Stop the use of harsh skin care to prevent additional unnecessary irritation post mask application.

Details of Procedure

Pictures are taken with our Visia technology to document your DermEclat treatment and reveal final results at the end of the treatment. Skin will then be cleansed again and an oil-removing solution will be applied to the skin to ensure the deepest penetration. A thick layer of the topical medical mask will then be applied all over the full face to ensure that all areas are addressed, with special attention to areas of more intense pigmentation. The mask will be left on from 6-12 hours in accordance with your skin type and washed off in the comfort of your own home. Approximately 4 to 6 weeks following the Derm-Eclat, a touch up treatment will be applied to your skin on the areas that have not fully faded.

Post Treatment Care

Patients may feel a slight burning sensation on the skin, which will subside within a few hours. Once the mask has been removed, patients may also notice their skin is pink or reddish in colour, which is also quite normal, and will subside within a few hours to a day. There are some individuals who experience no reaction following the removal of the mask, this is normal also and is related to your skin type and sensitivities.

Following the removal of the mask, the “maintenance cream,” will be applied to the skin. The maintenance cream is given to you prior to leaving the office. Only a very light layer of this cream is required.

Maria Cosmetic Center

Skin Care & Laser Clinic

“Maintenance cream” works as a follow-up treatment to maintain the pigmentation eliminating process. This cream should be applied as follows:

3x day (week 1 & week 2)

2x day (week 3 & week 4)

1x day (until the bottle is finished)

Continued.....

Maintenance cream is available in our skin spa for purchase should you require additional product. Patients can expect some mild to moderate peeling post treatment. Patients should be booking a 4-6 week touch-up appointment and a 3 month follow-up with the nurse to reassess the area and to take final photographs. You will begin to see results at approximately 1-3 weeks, with the most dramatic changes occurring around week 6. You should expect to be in the clinic for approximately 1 hour at each application appointment.

Patients are advised to avoid harsh skin care products as these may cause additional unnecessary irritation to the skin.

Possible Side Effects

You may or may not have any of the possible side effects, including peeling, dryness, redness, itchy, warm or tender skin, cracking, scabbing, sensitivity to sunlight, and temporary pigmentation changes.

*Please Note-- We do require a 20 % deposit when booking all procedures in the Skin Spa please.

Also, due to the large volume of bookings, we do require 48 hours' notice of cancellation. The cancellation fee is \$50.00 for every ½ hour of appointment time that is cancelled without the appropriate 48 hours' notice. If purchasing packages of treatments, please be advised that packages will last a full year from the date of the first treatment.
